

Decorative Glass for Windows & Doors

Photochromic Laminates

The ultimate designer touch for any home improvement project.

A liquid crystal interlayer film between the two panes of the double glazed unit allows the homeowner to have the glass completely transparent or opaque - all at the flick of a switch!

To complete the designer touch, Supaseal Glass photochromic laminates can be curved, silk-screen printed or sandblasted - all dependent upon the desired effect of the project.

Fusion or Fused Glass

Fused glass is a technique where separate pieces of glass are melted together to form a single shape. The design options are almost limitless with fusion glass as it can be formed into almost any shape.

Your glass truly becomes a piece of original art when a fused glass piece is created or incorporated into an existing unit.
