

Specialist Glazing Systems

Saveheat Solar Control

Domestic and commercial settings such as conservatories, sun rooms, quiet zones, or other areas which incorporate large areas of glass, can benefit from the use of solar control glass. As it suggests, solar control glass acts to keep a room at a comfortable temperature throughout the year. A recommended product combination is to use solar control glass with energy retention glass.

Solar control glass keeps the area temperate in summer, with the energy - efficient glass ensuring that you don't lose heat through the windows in the cooler months. Settings with a large area of glass can be comfortably utilised throughout the year.
